EDUCATIONAL PARTNERS

Why should you join our training programme?

Getting the basics right

While it is possible to learn laparoscopy on the job, you can learn it faster by attending our year long course. We teach you the basics by online videos. Our two day hands-on course on specially designed models prepares you for the real life gruel. You can add-on a live in-OT observation day to enhance your training experience.

A different approach

Our unique feature is the post-course contact programme. Every month we discuss one surgery in great detail over live conference (zoom). This will prepare you for taking the plunge with pyeloplasty, reimplantation, fundoplication, diaphragmatic hernia, inguinal hernia, undescended testis, thoracoscopy, and many other surgeries.

"I have improved a lot ..after the training....I am experiencing it daily..."

– our delegate

Move with technology, learn from some of the most enthusiastic experts in India

Faculty

Innovating Pediatric Care Through Laparoscopic Excellence

The modules

Online videos

Prepare early for the course, as soon as you register! Watch some of our simplified training videos on all the basics of laparoscopy.

Hands-on dry and wet lab

This is our favourite! Our faculty have broken down steps of common paediatric surgical procedures into small components and made models for you to practice on. We use both dry and wet tissues to elaborate the exact manouvres you can do to make surgery easy, less painful to you and encourage you to do long complex procedures. Get ready to do a pyeloplasty and more.

Live in-OT

Watch the action live with our experts demonstrating everything from OT positions, patient positions, anaesthesia and other troubleshooting, port insertion, and 6 to 8 simple to complex surgeries, over one long day in two operating rooms

Online contact programme

This new feature will take you through details of more than 15 procedures over one year, delivered via a monthly two hour meeting. You are encouraged to share your experiences of beginning laparoscopy or performing a procedure.

Mentorship

From 2025, we are offering a one year mentorship training programme based in Mumbai. You will be associated with and operate with our expert faculty in their respective hospitals. A daily plan will be made by the programme director who will assess your requirements and enable progressive learning on a one-to-one basis with our surgeons.
