WHAT IS A VASCULAR ACCESS DEVICE?

It is an intravenous line or catheter which can stay longer than a simple IV line allowing less pricks and infections

IN WHICH CASES CAN THESE BE USED?

- Simple infections needing one to two weeks of antibiotics
- Deep infections needing six or eight weeks of antibiotics
- Short or long chemotherapy
- IV nutrition - proteins, fats, carbohydrates
- Other infusions for rheumatological or haematological or endocrine conditions

Our team has a combined experience of
300+ device insertions

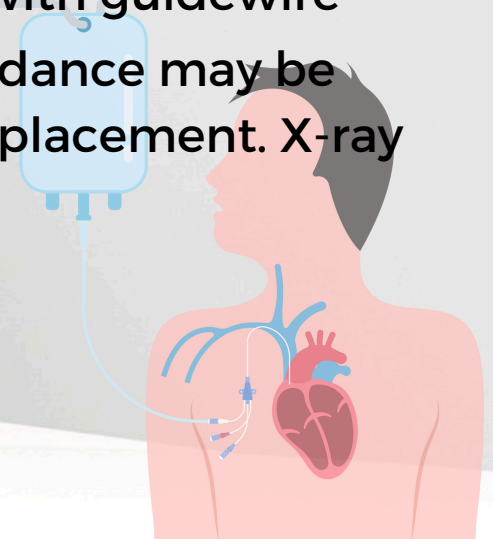

WHICH IS THE RIGHT DEVICE?

For very short treatments, a Leaderflex is used which is like a longer IV line made of better quality material (soft polyurethane) and which can be kept for one to four weeks.

For longer treatments, a PICC line is preferable. To reduce infection rate particularly in cancer patients, a Port is the most preferable device.

HOW IS IT INSERTED?

- The patient is counselled about pros and cons of the device, and post-care of the device and a written consent is obtained
- Aseptic precautions are taken in OT or ICU & seldinger technique is used with guidewire
- Ultrasound and/or C-arm guidance may be used to ensure accurate line placement. X-ray may be taken.

Did you know: A Leaderflex can be used like an IV line for four weeks

WHAT IS THE COST?

all inclusive of materials, insertion charges, special chlorhexidine dressings

Leaderflex: Rs. 12,800 - all inclusive

PICC line: ICU/OPD insertion: Rs. 24,000 (Vygon), Rs. 30,000 (Bard Groshong), Rs. 29,000 (Arrow non-coated), Rs. 32,900 (Arrow coated) - all inclusive

PICC Under GA: additional Rs. 7,500

Port insertion under GA: Rs. 28,000 plus

Cost of Port: (Rs 12,000 to Rs. 28,000 depending on company) (Consumables & Tests cost as per use Extra)

WHAT HOME CARE IS NEEDED?

- Out team can provide complete home care including flushing of device and dressings at your home
- Patients must beware of infections and line breakages
- In case of fever or damage to line, please report to our 24x7 casualty

Did you know: A PICC line can be used for collecting blood samples also

I HAVE MORE QUESTIONS

A patient can book a video consultation or an in-person consultation with Dr. Namrata Agrawal our chief intensivist and programme director for vascular access.

She will discuss your needs and help you book a procedure appropriate for you.

Alternatively your doctor can discuss this directly with Dr. Namrata Agrawal.

Call us on 9833049939 for an appointment.

Did you know: a Vascular Port can last for many months to a few years
